

# MAKE PLASTIC MILK

## You will need

- 236ml of milk
- 4 teaspoons of white vinegar
- A bowl
- A sieve

## What to do

1. Ask your friendly adult to heat up the milk until it is hot, but not boiling
2. Now ask the adult to carefully pour the milk into the bowl
3. Add the vinegar to the milk and stir it up with a spoon for about a minute
4. Now the fun part, pour the milk through the strainer into the sink – careful it may be hot!  
Left behind in the strainer is a mass of lumpy blobs. When it is cool enough, you can rinse the blobs off in water while you press them together. Now just make it into a shape and it will harden in a few days
